

Kit Programador USB para memoria EEPROM CH341A con clip SOP8

Codigo: 113130

Descripción

El programador CH341A puede realizar copias de seguridad, borrar, programar y calibrar en varios software. El clip SOP8 es perfecto para grabar el chip sin desmontarlo, lo que ahorra tiempo de soldadura y hace que la BIOS flash sea más simple y eficiente.

- Admite la mayoría de los chips BIOS EEPROM de la serie 24/25, reconoce el chip de la serie 25 automáticamente.
- El clip SOP8 permite la programación en circuito de EEPROM sin desmontar el chip, lo que hace que actualizar el BIOS sea más simple y eficiente.
- Root online está disponible con puerto USB a TTL. (El cable Dupont no está incluido)
- La conexión directa de la placa base MSI a la memoria flash está disponible con el pin SPI que corresponde al puerto MSI JSP11. (La línea de conexión dedicada no está incluida).
- La descarga del software de la serie STC de un solo chip está disponible.
- Viene con un chip de 8 pines / 16 pines y un encabezado de pines.

Especificaciones:

- Material: Material electrónico
- Opciones: Programador CH341A / Clip CH341A y SOP8 (opcional)
- Poder: 5W
- Voltaje: 5 V
- Corriente: 1A
- Tamaño del artículo: 9.2 * 2.7 * 1.2 cm / (programador CH341A)
- Peso del artículo: 40 g / 1,41 oz
- Tamaño del paquete: 10 * 3,5 * 1,5 cm / 3,93 * 1,37 * 0.59in
- Peso del paquete: 41g / 1,44 oz

Lista de empaque:

- 1 * programador CH341A
- 1 * Clip de flash SOP8
- Chip de 1 * 8 pines / 16 pines
- 1 * Pin encabezado
